Please amend the Abstract as follows:

An image sending device ~~and an image sending method enable selecting and setting a resolution corresponding to a selected image quality from a range of applicable resolutions~~ has a functional block in the control section for the resolution setting operation. The control section ~~device is made up of~~ includes a sending destination/sending mode setting section for setting a sending mode for sending image data from plural types of sending modes, an image quality setting section for setting an image quality for the sending image data, a resolution setting section for setting a resolution corresponding to the image quality set by the image quality setting section, ~~referring to a resolution setting table, from a range of applicable resolutions for the sending mode set by the sending destination/sending mode setting section,~~ and an image processing section for processing the image data, based on the resolution set by the resolution setting section into a ~~form-suitable~~ form ~~for the sending mode set by the sending destination/sending mode setting section.~~ This makes it possible to set a suitable resolution according to the sending mode by specifying the image quality, thereby easily setting the resolution.
